

get\_entry\_by\_reason

```
graph LR; A[get_entry_by_reason] --> B[find_entry]; A --> C[insert_into_list];
```

The diagram illustrates a control flow from a central node to two target nodes. The central node, 'get\_entry\_by\_reason', is a gray rectangle on the left. Two blue arrows originate from its right side: one points diagonally up and to the right to a white rectangle labeled 'find\_entry', and the other points diagonally down and to the right to a white rectangle labeled 'insert\_into\_list'. All rectangles have black borders.
