

get\_entry\_by\_number

```
graph LR; A[get_entry_by_number] --> B[find_entry]; A --> C[insert_into_list];
```

The diagram illustrates a control flow from a single source node to two target nodes. The source node, 'get\_entry\_by\_number', is a gray rectangle on the left. Two blue arrows originate from its right side: one points diagonally up and right to the 'find\_entry' node, and the other points diagonally down and right to the 'insert\_into\_list' node. Both target nodes are white rectangles on the right.
